# Package aranet Procedural Elements

## ExtendedTextHelper.php

- **Package** aranet

*string* function do\_highlight(\$keywords, \$message, [\$stag = "<b>"], [\$etag = "</b>"]) [*line 99*]

**Function Parameters:**

- *array* **\$keywords** keywords to highlight
- *string* **\$message** string to highlight the keywords in
- *string* **\$stag** starting HTML tag for the highlighted string
- *string* **\$etag** ending HTML tag for the highlighted string

### highlight a given text

- **Author** Pablo S  nchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es) >

*string* function fo\_encode(\$text, [\$font = 'DejaVuSans']) [*line 68*]

**Function Parameters:**

- *string* **\$text**
- *string* **\$font**

### encodes html code for Apache FOP templates

- **Author** Pablo SÃ¡nchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es)>

*string* function removeHTML(\$html) [*line 10*]

**Function Parameters:**

- *string* **\$html**

**removes HTML from given text**

- **Author** Pablo SÃ¡nchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es)>

*string* function truncate\_text\_with\_html(\$text, \$long, [\$truncate\_string = '...'], \$html) [*line 38*]

**Function Parameters:**

- *string* **\$html**
- *integer* **\$long**
- *string* **\$truncate\_string**
- **\$text**

**truncate text with HTML tags**

- **Author** Pablo SÃ¡nchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es)>

# GlobalHelper.php

- **Package** aranet

*void* function generate\_tag\_cloud(\$tags) [line 41]

**Function Parameters:**

- *array* **\$tags** array of Tags objects

**generates a personalized tag cloud**

- **Author** Pablo SÃ¡nchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es) >

*string* function get\_search\_terms(\$words, \$all\_words) [line 11]

**Function Parameters:**

- *string* **\$words** words searched separated by spaces
- *boolean* **\$all\_words** true if must search all words

**get\_search\_terms function: returns a string with words separated by ',' or by '+' depends the \$all\_worrrds**

- **Author** Pablo SÃ¡nchez

*string* function link\_to\_tag(\$tag\_name, \$uri) [line 29]

**Function Parameters:**

- *string* **\$tag\_name** the name of the tag (text link)

- *string* **\$uri** the uri for link

returns a link with rel=tag attribute

- **Author** Pablo Sánchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es) >

# PaginationHelper.php

- **Package** aramet

*string* function pager\_navigation(\$pager, \$uri) [*line 11*]

**Function Parameters:**

- *object* **\$pager** the pager
- *string* **\$uri** the base link

**Returns a navigation HTML fragment**

- **Author** Pablo S  nchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es) >

*string* function pager\_results(\$pager) [*line 87*]

**Function Parameters:**

- *object* **\$pager** the pager

**Formats the number of results for a pager**

- **Author** Pablo S  nchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es) >

*string* function repagination\_links(\$pager, \$uri) [*line 58*]

**Function Parameters:**

- *object* **\$pager** the pager
- *string* **\$uri** the base link

**Returns a repagination (20, 40, 60...) HTML fragment**

- **Author** Pablo Sánchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es) >

# StyleHelper.php

- **Package** aranet

*string* function icon\_gtip(\$title, [\$options = ""]) [line 153]

## **Function Parameters:**

- *string* **\$title** the title of the link
- *string* **\$options** additional options for the link

**return a link for gtip dialog**

- **Author** Pablo SÃ¡nchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es) >

*string* function link\_to\_styled(\$text, [\$route = ""], [\$style\_options = ""], [\$options = ""]) [line 29]

## **Function Parameters:**

- *string* **\$text** name of the link, i.e. string to appear between the <a> tags
- *string* **\$route** 'module/action' or '@rule' of the action
- *array* **\$style\_options** additional style options
- *array* **\$options** additional HTML compliant <a> tag parameters

**Automatically adds a class name to the link if the link route matches the current module or route.**

## **Style Options:**

- 'class' - the class name to append to the link, defaults to 'current'
- 'module\_only' - append class name if the current module and link module match
- 'tag' - an html to encapsulate the link, which will receive the class name rather than the <a> tag

## **Examples:**

```
1 echo link_to_styled('Events', 'event/list', 'class=active', 'id=event_link', );
2 if the current route is 'event/list', then:
3 => < a href="path/to/event/list/action" id="event_link"
class="active" > Events</ a>
4
5 echo link_to_styled('Events', 'event/list', 'class=active module_only=true tag=li',
'id=event_link');
```

```

6         if the current module matches the module present in the route, then:
7         => <         li class="active"         ><         a href="path/to/event/list/action"
id="event_link"         > Events</         a></         li>

```

- **See** `link_to`

*string* function `remote_icon_gtip($title, [$options = "])` [line 139]

**Function Parameters:**

- *string* **\$title** the title of the link
- *string* **\$options** additional options for the link

**return a link to remote for gtip dialog**

- **Author** Pablo Sánchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es)>

*string* function `show_sort_type($type)` [line 125]

**Function Parameters:**

- *string* **\$type**

**helper function which is used in the `sortable_link_to` function**

- **Author** Frank Stelzer

*string* function `sortable_link_to($name, [$base_internal_uri = "], [$sort_name = "], [$ns = "])` [line 98]

**Function Parameters:**

- *string* **\$name**
- *string* **\$base\_internal\_uri**
- *string* **\$sort\_name**
- *string* **\$ns** the name space

**This helper function does exactly the same code output than**

```

-----      <?php if ($sf_user->getAttribute('sort', null, 'sf_admin/news/sort') ==
'is_published'):    ?>      <?php echo link_to(__('Is published'),
'news/list?sort=is_published&type=' . ($sf_user->getAttribute('type',
'sf_admin/news/sort') == 'asc' ? 'desc' : 'asc')) ?>      (<?php echo __($sf_user-
>getAttribute('type', 'asc', 'sf_admin/news/sort')) ?>)    <?php else: ?>    <?php
echo link_to(__('Is published'), 'news/list?sort=is_published&type=asc') ?>
<?php endif; ?> -----

```

- **Author** Frank Stelzer

# Package aranet Classes

## Class addressActions

[line 11]

**address actions.**

- **Package** aranet
- **Sub-Package** address
- **Author** Pablo Sánchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es) >
- **Version** SVN: \$Id: actions.class.php 3 2008-08-06 07:48:19Z pablo \$

*void function addressActions::executeAutocomplete() [line 141]*

**executes autocomplete action**

- **Author** Pablo Sánchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es) >
- **Access** public

*void function ext\_format\_currency(\$amount, [\$decimals = 0], [\$currency = null], [\$culture = null]) [line 178]*

### **Function Parameters:**

- **\$amount**
- **\$decimals**
- **\$currency**
- **\$culture**

*void function ext\_format\_number(\$number, [\$decimals = 0], [\$div = 1], [\$culture = null]) [line 128]*

### **Function Parameters:**

- **\$number**
- **\$decimals**
- **\$div**
- **\$culture**

*void function format\_code(\$string, [\$format = '00.000']) [line 123]*

### **Function Parameters:**

- *string* **\$string** the unformatted ssn to format
- *string* **\$format** the format to use, defaults to '00.000'

## **Formats a spanish CP Number.**

<strong>Example:</strong>

```
1 echo format\_code('12345');  
2 // => 12.345
```

- See [format\\_string\(\)](#)

*void function format\_eur(\$money, [\$eur = true], [\$format = '%0.2f']) [line 198]*

**Function Parameters:**

- *string* **\$money** the unformatted amount to format
- *string* **\$eur** the format to use, defaults to '\$%0.2f'
- **\$format**

**Formats a EUR currency value with two decimal places and a euro sign.**

- See [sprintf](#)

*void function format\_exp(\$string, [\$format = '00-00']) [line 298]*

**Function Parameters:**

- *string* **\$string** the unformatted expiration string to format
- *string* **\$format** the format to use, defaults to '00-00'

**Formats a credit card expiration string. Expects 4-digit string (MMYY).**

- See [format\\_string\(\)](#)

*void function format\_filesize(\$value, [\$unit = 'KB']) [line 144]*

**Function Parameters:**

- **\$value**
- **\$unit**

*void* function `format_hour($hours, [$symbol = true], [$format = '%0.2f'])` [*line 211*]

**Function Parameters:**

- *string* **\$hours** the unformatted amount to format
- *string* **\$symbol** the format to use, defaults to '\$%0.2f'
- **\$format**

**Formats a hours time value with two decimal places and a hours suffix.**

- See [sprintf](#)

*string* function `format_indicator($indicator)` [*line 349*]

**Function Parameters:**

- *object* **\$indicator**

**Formats a indicator object**

- **Author** Pablo Sánchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es) >

*void* function `format_percent($percent, [$symbol = true], [$format = '%0.2f'])` [*line 224*]

**Function Parameters:**

- *string* **\$percent** the unformatted amount to format
- *string* **\$symbol** the format to use, defaults to '\$%0.2f'
- **\$format**

**Formats a EUR currency value with two decimal places and a dollar sign.**

- See [sprintf](#)

the function `format_string($string, $format)` [line 37]

**Function Parameters:**

- *string* **\$string** the string to format
- *string* **\$format** the format to apply

**Formats a number by injecting nonnumeric characters in a specified format into the string in the positions they appear in the format.**

<strong>Example:</strong>

```
1 echo format_string('1234567890', '(000) 000-0000');
2 // => (123) 456-7890
3
4 echo format_string('1234567890', '000.000.0000');
5 // => 123.456.7890
```

void function `format_usd($money, [$dollar = true], [$format = '%0.2f'])` [line 324]

**Function Parameters:**

- *string* **\$money** the unformatted amount to format
- *string* **\$dollar** the format to use, defaults to '\$%0.2f'
- **\$format**

**Formats a USD currency value with two decimal places and a dollar sign.**

- See [sprintf](#)

void function `is_alphanumeric($string)` [line 337]

**Function Parameters:**

- *string* **\$string** the string to check as alpha/numeric

**Determines if a string has only alpha/numeric characters.**

- See [preg\\_match](#)
- See [is\\_numeric](#)

*void function mask\_credit\_card(\$string, [\$format = '\*\*\*\* \* 0000']) [line 311]*

**Function Parameters:**

- *string* **\$string** the unformatted credit card number to format
- *string* **\$format** the format to use, defaults to '\*\*\*\* \* 0000'

**Formats (masks) a credit card.**

- See [mask\\_string\(\)](#)

*string function mask\_string(\$string, \$format, [\$ignore = ' ']) [line 263]*

**Function Parameters:**

- *string* **\$string** the string to transform
- *string* **\$format** the mask format
- *string* **\$ignore** a string (defaults to a single space) containing characters to ignore in the format

**Transforms a number by masking characters in a specified mask format, and ignoring characters that should be injected into the string without matching a character from the original string (defaults to space).**

<strong>Example:</strong>

```
1 echo mask_string('1234567812345678', '*****0000');
2 // => *****5678
3
4 echo mask_string('1234567812345678', '**** * 0000');
5 // => **** * 5678
6
7 echo mask_string('1234567812345678', '**** - **** - **** - 0000', ' -');
8 // => **** - **** - **** - 5678
```

*double* function round\_amount(\$amount, [\$decimals = 2], [\$div = 1]) [line 365]

**Function Parameters:**

- *double* **\$amount**
- *integer* **\$decimals**
- *double* **\$div** a division number

## Rounds an amount

- **Author** Pablo S  nchez < [pablo.sanchez@aranova.es](mailto:pablo.sanchez@aranova.es) >

*void* function smart\_format\_filesize(\$value) [line 162]

**Function Parameters:**

- **\$value**

*void* function smart\_format\_phone(\$string) [line 90]

**Function Parameters:**

- *string* **\$string** the unformatted phone number to format

## Formats a variable length phone number, using a standard format.

<strong>Example:</strong>

```
1 echo smart_format_phone('1234567');
2 // => 123-4567
3
4 echo smart_format_phone('123456789');
5 // => 123 456 789
6
7 echo smart_format_phone('1234567890');
8 // => (123) 456-7890
9
10 echo smart_format_phone('91234567890');
11 // => 9 (123) 456-7890
12
13 echo smart_format_phone('+34123456789');
14 // => 12 +34 123 456 789
15
16 echo smart_format_phone('123456');
17 // => 123456
```

- See [format\\_string\(\)](#)

void function to\_currency(\$number, [\$round = 2]) [*line 233*]

**Function Parameters:**

- **\$number**
- **\$round**

## Class incomeActions

<i>returns contact from params</i>	
<a href="#">contactActions::executeUpdate()</a>	25
<i>executes update action</i>	
<a href="#">contactActions::executeMinilist()</a>	24
<i>executes minilist action</i>	
<a href="#">clientActions::getSortColumn()</a>	22

<i>returns order column</i>	
<a href="#">clientActions::getClient()</a>	22
<i>returns client from params</i>	
<a href="#">cashActions::getCashItem()</a>	20
<i>returns cash item from params</i>	
<a href="#">cashActions::executeUpdate()</a>	20
<i>executes update action</i>	
<a href="#">cashActions::executeShow()</a>	20
<i>executes show action</i>	
<a href="#">cashActions::addFiltersCriteria()</a>	19
<i>adds filters criteria</i>	
<a href="#">clientActions</a>	21
<i>client actions.</i>	
<a href="#">clientActions::addFiltersCriteria()</a>	21
<i>adds filters criteria</i>	
<a href="#">clientActions::executeUpdate()</a>	22
<i>executes update action</i>	
<a href="#">clientActions::executeStats()</a>	22
<i>executes stats action</i>	
<a href="#">clientActions::executeEditbusiness()</a>	21
<i>executes editbusiness action</i>	
<a href="#">clientActions::executeAutocomplete()</a>	21
<i>executes autocomplete action</i>	
<a href="#">cashActions</a>	19
<i>cash actions.</i>	

## D

<a href="#">dashboardActions::executeIndex()</a>	27
<i>executes index action</i>	
<a href="#">dashboardActions::executeSaveCriteria()</a>	27
<i>executes saveCriteria action</i>	
<a href="#">dashboardActions::executeShowGraphic()</a>	27
<i>executes showGraphic action</i>	
<a href="#">dashboardActions::executeGetGraphic()</a>	26
<i>executes getGraphic action</i>	
<a href="#">dashboardActions::executeExpenses()</a>	26
<i>executes expenses action</i>	
<a href="#">dashboardActions</a>	25
<i>dashboard actions.</i>	
<a href="#">dashboardActions::\$lm</a>	26
<a href="#">dashboardActions::\$rm</a>	26
<a href="#">do_highlight()</a>	2
<i>highlight a given text</i>	

## E

<a href="#">expenseActions::getExpenseItem()</a>	30
<i>returns expense_item from params</i>	
<a href="#">expenseActions::executeUpdatevalidation()</a>	29
<i>executes editvalidation action</i>	

<a href="#">expenseActions::getSortColumn()</a>	30
<i>returns order column</i>	
<a href="#">expenseActions::preExecute()</a>	30
<i>pre executes this action</i>	
<a href="#">ext_format_number()</a>	38
<a href="#">ext_format_currency()</a>	38
<a href="#">expenseActions::executeUpdate()</a>	29
<i>executes update action</i>	
<a href="#">expenseActions::executePrint()</a>	29
<i>executes print action</i>	
<a href="#">expenseActions::addFiltersCriteria()</a>	28
<i>adds filters criteria</i>	
<a href="#">expenseActions</a>	27
<i>expense actions.</i>	
<a href="#">expenseActions::executeCreate()</a>	28
<i>executes create action</i>	
<a href="#">expenseActions::executeDownloadFiles()</a>	28
<i>executes downloadfiles action</i>	
<a href="#">expenseActions::executeEditvalidation()</a>	29
<i>executes editvalidation action</i>	
<a href="#">expenseActions::executeEdit()</a>	29
<i>executes edit action</i>	
<a href="#">ExtendedTextHelper.php</a>	2

## F

<a href="#">format_hour()</a>	40
<i>Formats a hours time value with two decimal places and a hours suffix.</i>	
<a href="#">format_filesize()</a>	39
<a href="#">format_exp()</a>	39
<i>Formats a credit card expiration string. Expects 4-digit string (MMYY).</i>	
<a href="#">format_indicator()</a>	40
<i>Formats a indicator object</i>	
<a href="#">format_percent()</a>	40
<i>Formats a EUR currency value with two decimal places and a dollar sign.</i>	
<a href="#">format_usd()</a>	41
<i>Formats a USD currency value with two decimal places and a dollar sign.</i>	
<a href="#">format_string()</a>	41
<i>Formats a number by injecting nonnumeric characters in a specified format into the string in the positions they appear in the format.</i>	
<a href="#">format_eur()</a>	39
<i>Formats a EUR currency value with two decimal places and a euro sign.</i>	
<a href="#">format_code()</a>	38
<i>Formats a spanish CP Number.</i>	
<a href="#">fileActions::addFiltersCriteria()</a>	31
<i>adds filters criteria</i>	
<a href="#">fileActions</a>	31
<i>file actions.</i>	
<a href="#">fileActions::executeUpdate()</a>	31
<i>executes update action</i>	
<a href="#">fileActions::getsfPropelFileStorageInfo()</a>	31
<a href="#">fileActions::preExecute()</a>	32

<i>pre executes this action</i>	
<a href="#">fileActions::getSortColumn()</a>	32
<i>returns order column</i>	
<a href="#">fo_encode()</a>	2
<i>encodes html code for Apache FOP templates</i>	

## G

<a href="#">get_search_terms()</a>	4
<i>get_search_terms function: returns a string with words separated by ',' or by '+' depends the \$all_worrrds</i>	
<a href="#">generate_tag_cloud()</a>	4
<i>generates a personalized tag cloud</i>	
<a href="#">GlobalHelper.php</a>	4

## I

<a href="#">invoiceActions::executeListitems()</a>	48
<i>executes listitems action</i>	
<a href="#">invoiceActions::executePrint()</a>	48
<i>executes print action</i>	
<a href="#">invoiceActions::executeEditstatus()</a>	48
<i>executes editstatus action</i>	
<a href="#">invoiceActions::executeEdititems()</a>	47
<i>executes edititems action</i>	
<a href="#">invoiceActions::executeEdit()</a>	47
<i>executes edit action</i>	
<a href="#">invoiceActions::executeUpdate()</a>	48
<i>executes update action</i>	
<a href="#">invoiceActions::executeUpdateitems()</a>	49
<i>executes updateitems action</i>	
<a href="#">invoiceActions::preExecute()</a>	49
<i>pre executes this action</i>	
<a href="#">invoiceActions::getSortColumn()</a>	49
<i>Returns the column name to sort list by default</i>	
<a href="#">invoiceActions::getInvoice()</a>	49
<i>returns invoice from params</i>	
<a href="#">invoiceActions::executeUpdatestatus()</a>	49
<i>executes updatestatus action</i>	
<a href="#">invoiceActions::executeDeleteitem()</a>	47
<i>executes deleteitem action</i>	
<a href="#">invoiceActions::executeCreateitem()</a>	47
<i>executes create_item action</i>	
<a href="#">incomeActions::executeCreate()</a>	45
<i>executes create action</i>	
<a href="#">incomeActions::executeEdit()</a>	45
<i>executes edit action</i>	
<a href="#">incomeActions::addFiltersCriteria()</a>	44
<i>adds filters criteria</i>	
<a href="#">incomeActions</a>	44
<i>income actions.</i>	

<a href="#">is_alphanumeric()</a>	41
<i>Determines if a string has only alpha/numeric characters.</i>	
<a href="#">incomeActions::executeUpdate()</a>	45
<i>executes update action</i>	
<a href="#">incomeActions::getIncomeItem()</a>	45
<a href="#">invoiceActions::executeCreate()</a>	46
<i>executes create action</i>	
<a href="#">invoiceActions::addFiltersCriteria()</a>	46
<i>adds filters criteria</i>	
<a href="#">invoiceActions</a>	46
<i>invoice actions.</i>	
<a href="#">incomeActions::getSortColumn()</a>	45
<i>returns order column</i>	
<a href="#">icon_gtip()</a>	8
<i>return a link for gtip dialog</i>	

## L

<a href="#">link_to_styled()</a>	8
<i>Automatically adds a class name to the link if the link route matches the current module or route.</i>	
<a href="#">link_to_tag()</a>	4
<i>returns a link with rel=tag attribute</i>	

## M

<a href="#">myActions::processList()</a>	36
<i>process list action</i>	
<a href="#">myActions::processFilters()</a>	36
<i>process filters</i>	
<a href="#">myActions::handleErrorUpdate()</a>	35
<i>handles update errors</i>	
<a href="#">myActions::handleErrorEdit()</a>	35
<i>handles update errors</i>	
<a href="#">myActions::processSort()</a>	36
<i>process sort</i>	
<a href="#">myUser</a>	37
<i>myUser class</i>	
<a href="#">mask_string()</a>	42
<i>Transforms a number by masking characters in a specified mask format, and ignoring characters that should be injected into the string without matching a character from the original string (defaults to space).</i>	
<a href="#">mask_credit_card()</a>	42
<i>Formats (masks) a credit card.</i>	
<a href="#">myUser::getUserId()</a>	37
<i>getUserId function</i>	
<a href="#">myUser::\$aProfile</a>	37
<a href="#">myActions::getSortColumn()</a>	35
<i>returns order column</i>	
<a href="#">myActions::getOrderType()</a>	35
<i>returns order type</i>	

<a href="#">myActions::executeEdit()</a>	33
<i>executes edit action</i>	
<a href="#">myActions::executeDelete()</a>	33
<i>executes delete action</i>	
<a href="#">myActions::executeCreate()</a>	33
<i>executes create action</i>	
<a href="#">myActions::addSortCriteria()</a>	32
<i>adds sort criteria</i>	
<a href="#">myActions::executeIndex()</a>	33
<i>executes index action</i>	
<a href="#">myActions::executeList()</a>	34
<i>executes list action</i>	
<a href="#">myActions::getModel()</a>	34
<i>returns the model from the module name</i>	
<a href="#">myActions::executeShow()</a>	34
<i>executes show action</i>	
<a href="#">myActions::executeListByTag()</a>	34
<i>executes listByTag action</i>	
<a href="#">myActions</a>	32
<i>myActions class</i>	

## N

<a href="#">NumberExtendedHelper.php</a>	38
<i>NumberExtendedHelper.</i>	

## P

<a href="#">projectActions::executeUpdate()</a>	53
<i>executes update action</i>	
<a href="#">projectActions::executeUpdatemilestone()</a>	54
<i>executes updatemilestone action</i>	
<a href="#">projectActions::executeStats()</a>	53
<i>executes stats action</i>	
<a href="#">projectActions::executeGetTaskSelect()</a>	53
<i>executes getTaskSelect action</i>	
<a href="#">projectActions::executeGetMilestones()</a>	53
<i>executes getMilestones action</i>	
<a href="#">projectActions::executeUpdatestatus()</a>	54
<i>executes updatestatus action</i>	
<a href="#">projectActions::executeUpdatetask()</a>	54
<i>executes updatetask action</i>	
<a href="#">projectActions::getTask()</a>	55
<i>returns task from params</i>	
<a href="#">projectActions::preExecute()</a>	55
<i>pre executes this action</i>	
<a href="#">projectActions::getSortColumn()</a>	55
<i>Returns the column name to sort list by default</i>	
<a href="#">projectActions::getProject()</a>	55
<i>returns project from params</i>	
<a href="#">projectActions::getMilestone()</a>	54

<i>returns milestone from params</i>	
<a href="#">projectActions::executeGetFrecuentlyTaskTitle()</a>	52
<i>executes getFrecuentlyTaskTitle action</i>	
<a href="#">projectActions::executeGetClientSelect()</a>	52
<i>executes getClientSelect action</i>	
<a href="#">projectActions::addFiltersCriteria()</a>	50
<i>adds filters criteria</i>	
<a href="#">projectActions::executeAutocomplete()</a>	50
<i>executes autocomplete action</i>	
<a href="#">projectActions</a>	50
<i>project actions.</i>	
<a href="#">pager_results()</a>	6
<i>Formats the number of results for a pager</i>	
<a href="#">pager_navigation()</a>	6
<i>Returns a navigation HTML fragment</i>	
<a href="#">projectActions::executeCreatemilestone()</a>	51
<i>executes createmilestone action</i>	
<a href="#">projectActions::executeCreatetask()</a>	51
<i>executes createtask action</i>	
<a href="#">projectActions::executeEdittask()</a>	52
<i>executes edittask action</i>	
<a href="#">projectActions::executeGetBudgetSelect()</a>	52
<i>executes getBudgetSelect action</i>	
<a href="#">projectActions::executeEditmilestone()</a>	52
<i>executes editmilestone action</i>	
<a href="#">projectActions::executeDeletetask()</a>	51
<i>executes createtask action</i>	
<a href="#">projectActions::executeDeletemilestone()</a>	51
<i>executes deletemilestone action</i>	
<a href="#">PaginationHelper.php</a>	6

## R

<a href="#">round_amount()</a>	43
<i>Rounds an amount</i>	
<a href="#">remote_icon_gtip()</a>	9
<i>return a link to remote for gtip dialog</i>	
<a href="#">repagination_links()</a>	6
<i>Returns a repagination (20, 40, 60...) HTML fragment</i>	
<a href="#">removeHTML()</a>	3
<i>removes HTML from given text</i>	

## S

<a href="#">settingActions::executeUpdate()</a>	56
<i>executes update action</i>	
<a href="#">settingActions::addSortCriteria()</a>	56
<a href="#">settingActions::getsfSetting()</a>	57
<i>returns sfSetting from params</i>	
<a href="#">settingActions::processFilters()</a>	57
<a href="#">settingActions::processSort()</a>	57

<a href="#">settingActions::addFiltersCriteria()</a>	56
<a href="#">settingActions</a>	56
<i>setting actions.</i>	
<a href="#">show_sort_type()</a>	9
<i>helper function which is used in the sortable_link_to function</i>	
<a href="#">sortable_link_to()</a>	9
<i>This helper function does exactly the same code output than</i>	
<a href="#">smart_format_filesize()</a>	43
<a href="#">smart_format_phone()</a>	43
<i>Formats a variable length phone number, using a standard format.</i>	
<a href="#">StyleHelper.php</a>	8

## T

<a href="#">timesheetActions::executeEdit()</a>	59
<i>executes edit action</i>	
<a href="#">timesheetActions::executeUpdate()</a>	59
<i>executes update action</i>	
<a href="#">timesheetActions::getTimesheet()</a>	59
<i>returns timesheet from params</i>	
<a href="#">timesheetActions::preExecute()</a>	59
<i>pre executes this action</i>	
<a href="#">timesheetActions::addFiltersCriteria()</a>	58
<i>adds filters criteria</i>	
<a href="#">timesheetActions</a>	58
<i>timesheet actions.</i>	
<a href="#">to_currency()</a>	44
<a href="#">tagActions</a>	57
<i>tag actions.</i>	
<a href="#">tagActions::executeAutocomplete()</a>	58
<i>executes autocomplete action</i>	
<a href="#">truncate_text_with_html()</a>	3
<i>truncate text with HTML tags</i>	

## U

<a href="#">userActions::getSortColumn()</a>	61
<i>returns order column</i>	
<a href="#">userActions::getSfGuardUserProfile()</a>	61
<i>returns invoice from params</i>	
<a href="#">userActions::executeUpdate()</a>	60
<i>executes update action</i>	
<a href="#">userActions::addFiltersCriteria()</a>	60
<i>adds filters criteria</i>	
<a href="#">userActions</a>	60
<i>user actions.</i>	

## V

<a href="#">vendorActions::getSortColumn()</a>	62
--	----

<i>returns order column</i>	
<a href="#"><u>vendorActions::getVendor()</u></a>	63
<i>returns vendor from params</i>	
<a href="#"><u>vendorActions::executeUpdate()</u></a>	62
<i>executes update action</i>	
<a href="#"><u>vendorActions::executeStats()</u></a>	62
<i>executes stats action</i>	
<a href="#"><u>vendorActions::addFiltersCriteria()</u></a>	61
<i>adds filters criteria</i>	
<a href="#"><u>vendorActions::executeAutocomplete()</u></a>	62
<i>executes autocomplete action</i>	
<a href="#"><u>vendorActions</u></a>	61
<i>vendor actions.</i>	

## W

<a href="#"><u>widgetsComponents::executeTags()</u></a>	64
<i>executeTags function: executes Tags action</i>	
<a href="#"><u>widgetsComponents::executeSubnav()</u></a>	63
<i>executeSubnav function: executes Subnav action</i>	
<a href="#"><u>widgetsComponents::executeCalendar()</u></a>	63
<i>Executes Calendar action</i>	
<a href="#"><u>widgetsComponents</u></a>	63
<i>widgets components.</i>
